# NETWORK
MANAGEMENT

INCREASE YOUR VISIBILITY

Network Management is the way you monitor the health of your network.
It's an imperative ingredient to operating a network, and
ensuring the quality of service you expect from your network.

Mudge Engineering Associates Inc. has years of experience in installation, provisioning, turn-up and configuration of Network Management Systems. As your network grows, a strong network management system evolves, continuing to meet your operational needs.

TOP CONSIDERATIONS WHEN PLANNING A NETWORK MANAGEMENT SYSTEM:
- Fault, Configuration, Accounting, Performance and Security Capabilities
- Site Environmental Alarm Retrieval (open door, high-low temp, etc.)
- Measurement of IP Component Interface Statistics
- Cut-through Interface Capabilities to non-native IP Devices
- Historical Reporting
- Network Segment Utilization and Capacity Management

If you don't have the network visibility you need, contact us to discuss.
