

# P25

## PUBLIC SAFETY

### Radio Communications Systems

In critical Public Safety response scenarios, voice communications between First Responders and their Dispatcher is of utmost importance.

The P25 Standard defines the Communications Protocol and Design Hierarchy for this multi-vendor supported system, used internationally for Public Safety Dispatch. P25 systems enable all of the interoperable functions that are necessary within the Public Safety Radio Communications environment.

The P25 Standard includes the following features:

- Proven Technology for more than two decades
- Interoperability across multiple Vendors
- Evolution based on National Design Standards
- Scalability
- Integrates with Existing Conventional Systems

P25 has evolved to be the proven choice for Public Safety Radio Communications Systems in North America.

Mudge Engineering Associates Inc. are Planning, Design and Implementation Specialists for P25 Systems. Discuss your P25 deployment requirements with us.
